Use this control panel to turn the monitor on or off, control volume, and select sources

There is an installed desktop computer in the cabinet underneath the monitor. If you do not see an image when selected make sure the computer is turned on. When finished, log out. Do not shut down.

To use your laptop connect to the HDMI cable shown here. There is also a network connection if needed

ShareLink lets you display your laptop or tablet device without wires. You must be on the skate-wireless network to connect. ShareLink uses an app on your smartphone or tablet and can mirror your laptop. Please note, Chrome Books are not supported.

You can video conference with any standard desktop conferencing software such as Skype, Zoom, or Google Hangouts using the installed camera and microphones. The camera is controlled with the remote control pictured on the right .

You must use the built in desktop computer to use the camera and microphones.

Shown on the right are wireless microphones sitting on their charger base. To use, set them on a table and tap the red microphone icon. The icon will turn green indicating the microphone is not muted and is ready to use. Tap it again to mute.

Remember to return the microphones to the charging base when finished.
